MB8120 provides both excellent wear and fracture resistance and is suitable for a wider range of applications.

MB8130

For heavy interrupted cutting

MB8130 has the highest fracture resistance and is ideal for unstable applications and heavy interrupted machining.

Both uncoated and coated CBN grades are manufactured using ultra micro-particle binder technology.

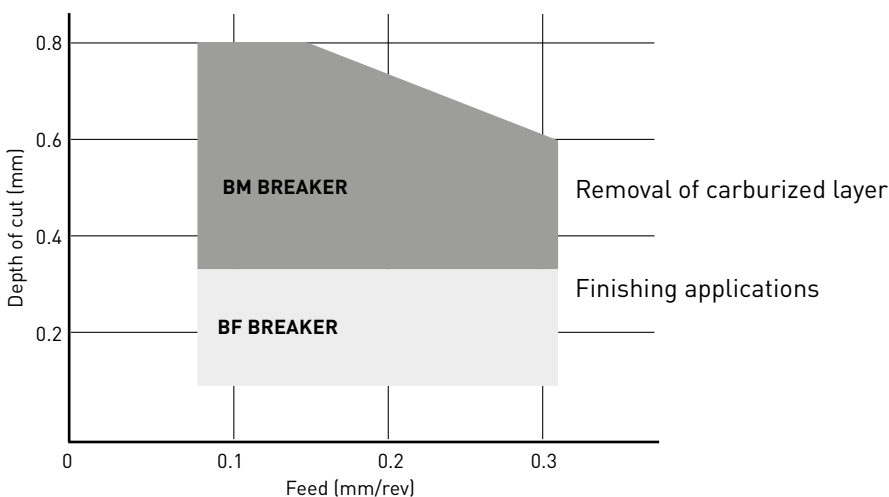

GEOMETRY

CUTTING EDGE PREPARATION

A wide variety of cutting edge preparations available for all applications.

BM/BF BREAKER

Breaker system for excellent chip control when finishing and removing carburized layers and hard-soft machining.

WIPER INSERT

IMPROVING SURFACE FINISHES

Under the same machining conditions as conventional breakers, but with the feed rate increased, the surface finish of the workpiece can be improved.

IMPROVING EFFICIENCY

High feed rates not only shorten machining times, but also make it possible to combine roughing and finishing operations.

INCREASED TOOL LIFE

When using in high feed conditions, the time required to cut one component is decreased, thus more parts can be machined with each insert. In addition, the high feed rate prevents rubbing, thereby delaying the progression of wear and increasing tool life.

IMPROVING CHIP CONTROL

Under high feed conditions, the chips generated become thicker and are more easily broken, thus, chip control is improved.
